Waveform Wonders: Radiology @ Resonant Diagnostic

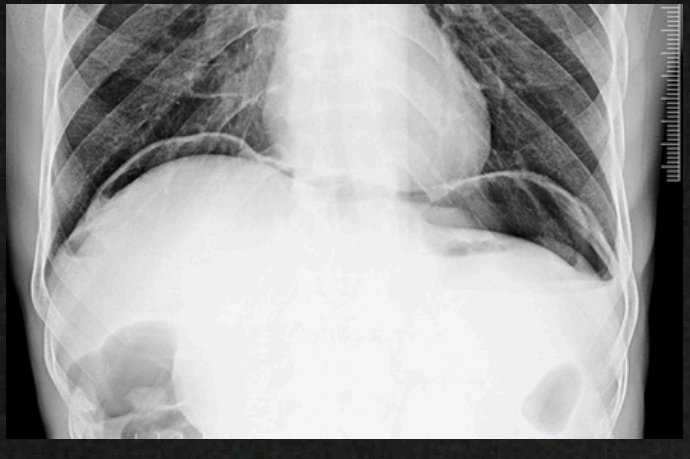

A Weekly Radiology Odyssey

A 50 yrs old Male Patient presented with severe acute epigastric pain. USG was done.

USG

- Showed echogenic free fluid in the abdomen
- Anterior wall defect in the antropyloric region measuring 7 mm was seen (yellow arrow below) – Peptic Perforation

X-Ray was done to confirm which showed pneumoperitoneum

Laparatomy was done and defect repaired

Occasionally , USG may be able to demonstrate the site of perforation !!
